**DETAILED ACTION**

1. This action is in response to amendment filed on March 03, 2008. Claims 1-36 and 38 have been previously cancelled. Claims 37 and 39-42 have been amended.
2. IDS submitted on 03/03/2008 have been considered.
3. Drawings submitted on 11/02/2000 have been approved.

***Allowable Subject Matter***

4. Claims 37 and 39-42 are allowed
5. The following is a statement of reasons for the indication of allowable subject matter:
  6. The closest prior art of record is Montanari et al., US Patent No. (5,478,990) referred to hereinafter as Montanari.

Montanari discloses a method for tracing the production history of food products, particularly meat products to enable verification of the origin of such products and to trace back the source of problems that may arise at the consumer level of product distribution. Montanari also discloses the use of a tracing number identifying a particular food product at a certain point in the production process. The tracking number is maintained as the animal is transferred from raiser to feedlot to slaughterhouse fabrication plant distributor and finally to the ultimate customer. Information such as animal's genetic makeup, weight, feeding regimen, microbiological profile, fat-to-lean meat ration etc., and such information can be correlated with animal's unique identification number and stored in a database; which ultimately allows a consumer of food particularly meat products to identify the source and origin of a food product in

order to trace back sources of contamination and/or to verify the organic or natural status of a food product.

The prior art of record does not disclose or suggest "comparing the agricultural product data against the compliance requirement at the management information system; generating a report of the real-time agricultural product information in a form of a graph based on the comparing at the management information system, the report being generated for reporting a level of compliance of the agricultural product and further being generated for evaluating a performance of an agricultural production system over a time period, the report including a list of certification, regulation, and accreditation standards that comply with the agricultural product data, the report further including a comparative rating of a metric with a certification standard based on statistic, the metric including a certification status and a relative compliance label, the certification status including one or more of a pass or a fail, the relative compliance label including two or more of a grade, a rating relative to the certification standard or a statistically derived confidence interval, wherein a resolution of the rating relative to the certification standard and a resolution of a certification criteria that define the certification standard are customizable; and communicating at the management information system the report to the user-computer system responsive to the request for real-time agricultural product information," as recited in independent claims 37 and 42. For these reason claims 37 and 42, are deemed to be allowable over the prior art of record, and claims 39-41 are allowable by dependency.

Non-patent literature dialog search was conducted, however no related NPL was

found.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled Comments on Statement of Reasons for allowance.
